Ideation Report Template

Personal Resume/Portfolio WebSite

1. Introduction

This is a personal resume website idea. It aims at presenting a person's resume in a new and captivating manner, in a way that isn't as boring as reading a piece of paper, in a way that that can impress the targeted people.

These kind of websites can reap the benefits in the way they are interactive. With some animations and interactions, we can take the resume/portfolio to whole new kind. If the website belongs to a web-developer or a UI/UX designer, this can also be used to showcase his/her talent. It can also serve as an example to prove that you are all aware of emerging technologies and trends.

2. Expected List of Features

Features to be included should be,

1. Easy navigation to each of the sections of resume/portfolio, so that it will be handy to checkout different parts of the page.

2. Provide a button to download PDF of the resume.

3. Links to connect on social media.

4. Responsive design.

3. Market Survey

I have searched on web for similar websites and found few in this web-page. All these websites are more or less similar to my idea, with revolutionary animations, front-end and UX design. Some have simple but captivating design and some have a very complex design, but, they are all with a well organized and arranged content, which is brief but provides all the necessary information about the person.
